The Cliff Effect: One Step Forward, Two Steps Back

Policy Design as a Disincentive for Economic Mobility

October 2012
ABOUT THE INDIANA INSTITUTE FOR WORKING FAMILIES
The Indiana Institute for Working Families (Institute) is a program of the Indiana Community Action Association, Inc. (IN-CAA). The Institute was founded in 2004 and conducts research and promotes public policies to help Hoosier families achieve and maintain economic self-sufficiency. The Institute is the only statewide program in Indiana that combines research and policy analysis on federal and state legislation, public policies, and programs impacting low-income working families with education and outreach. The Institute achieves its work by focusing its activities in the following areas: Public Policy: Research and Analysis; Education and Outreach; and National, Statewide, and Community Partnerships. To learn more about the Institute, please visit: [www.incap.org/iiwf.](http://www.incap.org/iiwf).

ABOUT THE INDIANA COMMUNITY ACTION ASSOCIATION (IN-CAA)
The Indiana Community Action Association, Inc. (IN-CAA) is a statewide not-for-profit membership corporation, incorporated in the State of Indiana in 1970. IN-CAA's members are comprised of Indiana's 23 Community Action Agencies (CAAs), which serve all of Indiana's 92 counties. IN-CAA envisions a state with limited or no poverty, where its residents have decent, safe, and sanitary living conditions, and where resources are available to help low-income individuals attain self-sufficiency. IN-CAA serves as an advocate and facilitator of policy, planning and programs to create solutions and share responsibility as leaders in the War Against Poverty. IN-CAA's mission is to help the state's CAAs address the conditions of poverty through: training and technical assistance; developing models for service delivery; and providing resources to help increase network capacity. For more information about IN-CAA, please visit: [www.incap.org.](http://www.incap.org)

ABOUT THE NATIONAL CENTER FOR CHILDREN IN POVERTY (NCCP)
The National Center for Children in Poverty (NCCP) is one of the nation's leading public policy centers dedicated to promoting the economic security, health, and well being of America's low-income families and children. NCCP uses research to inform policy and proactive with the goal of ensuring positive outcomes for the next generation. NCCP’s Making Work Supports Work Initiative promotes policy improvements to make work pay for low-wage workers and their families. For more information about NCCP, please visit: [www.nccp.org.](http://www.nccp.org)

ABOUT THE INDIANAPOLIS FOUNDATION
As Indiana's oldest and largest community foundation, The Indianapolis Foundation (a CICF affiliate) was created in 1916 to ensure that the quality of life in Marion County continuously improves; to help where the needs are greatest and the benefits to the community are most extensive; and to provide donors a vehicle for using their gifts in the best possible way now, and in the future as conditions in the community change.

ABOUT THE AUTHOR, DEREK THOMAS
Derek Thomas is a Policy Analyst with the Indiana Institute for Working Families. Since beginning with the Institute, Derek has authored: Work Sharing: A Win-Win-Win Strategy to Avoid Job Loss and The Status of Working Families Report, 2011. Derek is currently working on his Masters in Public Affairs/Policy Analysis at the School of Public and Environmental Affairs (SPEA) at Indiana University Purdue University Indianapolis (IUPUI). Derek obtained his Bachelor’s in Policy Studies from SPEA at IUPUI.
ACKNOWLEDGEMENTS

The Indiana Institute for Working Families would like to thank the following groups and individuals for their support in the development and completion of this report:

• **Dr. Curtis Skinner and his Staff at the National Center for Children in Poverty** for their hard work in creating a Family Resource Simulator for Indiana, and using Self-Sufficiency Standard data to illustrate the effects of policy decisions as they relate to low income families.

• **Indianapolis Foundation** for their generous support and overall enthusiasm about the “Cliff Effect” report.

• **Lora Olive of Olive Creative** for the graphic design of the “Cliff Effect” report.

• **John Craig** (Motion Graphic Designer), **David Michaels** (Video Curriculum Developer) and **Paul Symons** for creating the “Cliff Effect” infographic video.

• **Indiana Institute for Working Families Advisory Committee** for their time and valuable feedback on this report.

• **Indiana Community Action Association’s Board of Directors and Staff**, who provide support for the Institute and its work.

SUMMARY

With the support of the Indianapolis Foundation (a CICF affiliate), the Indiana Institute for Working Families (Institute), a program of the Indiana Community Action Association (IN-CAA), is working with National Center for Children in Poverty (NCCP) to illustrate the “cliff effect”—the benefit “cliff” that occurs when even a $0.50 increase in hourly wages leads to the complete termination of a benefit, and a dramatic net loss of resources. The unintended consequences of this design either leads to a disincentive towards economic mobility, or leads to a situation in which the parent or guardian is working harder, but is financially worse off. The report is modeled after NCCP’s “Making Work Pay” reports—a also sponsored by the Annie E. Casey Foundation. This report will be the first of its kind to use the Indiana specific Self-Sufficiency Standard.

“Self Sufficiency is a measure used to determine how much income a family of a particular composition in a given place requires to adequately meet their basic needs, such as housing, food, transportation, health insurance, child care and other necessities—without relying on public or private assistance.”

INTRODUCTION

The story in Indiana is no different than many states in the U.S, especially those in the “rust belt.” With the advent of job losses, beginning in the 1980’s, and further punctuated by the Great Recession, a growing number of Hoosiers were left without quality jobs and adequate incomes to afford the most basic necessities. These struggles that put Hoosier families in the red are not unique to a small population of the state. The reality is, poverty continues to rise in Indiana. Currently, a staggering 2.24 million Hoosiers live at or below 200 percent of the Federal Poverty Guidelines (FPG). To make matters worse, 71 percent of the state’s workforce earns below 200 percent of FPG, 28 percent earn below 100 percent of FPG, and 6 percent of Hoosiers are making minimum wage.

To help bring families closer to self-sufficiency by bridging the gap between low wage work and the increasing costs of basic necessities, “work supports programs” are designed to provide adequate resources for working families and simultaneously encourage progress in the workforce. This report will highlight the impact of work supports for low-income families, illustrate the “cliff effect”, and offer recommendations to help bring the budgets of Hoosier families back in the black.

Tools for Policy Analysis

NCCP’s Family Resource Simulator is an innovative, web-based tool that calculates the impact of federal and state work supports on the budgets of low- to moderate-income families. The Simulator illustrates the effectiveness of current policies that reward and encourage work. NCCP also uses this tool to model potential policy reforms.

The Self Sufficiency Standard is an updated, more accurate reflection of the real income needed to pay for a family’s expenses in today’s economy and makes it possible to determine if families’ incomes are enough to meet basic needs. The Standard has been calculated for 37 states and jurisdictions, including Indiana. The online Self-Sufficiency Standard Calculator can quickly calculate the Standard for any county and 70 family types in all 92 counties in Indiana.

See: www.indianaselfsufficiencystandard.org

---

*The current poverty measure was established in the 1960s and is now widely acknowledged to be flawed. It was based on research indicating that families spent about one-third of their incomes on food – the official poverty level was set by multiplying food costs by three.” As such, many public programs eligibility guidelines are set well above the FPG. NCCP, Measuring Poverty in the United States: www.nccp.org/publications/pub_876.html

*Indiana lags behind Wisconsin, Ohio, Michigan and Illinois by all listed measures.
While self-sufficiency is generally defined as 200 percent FPG, according to the Self-Sufficiency Standard (which measures self-sufficiency in all 92 counties based on local variances), the average income for one adult, one preschooler and one school age child (across all 92 counties) required to be economically self-sufficient is more than 175 percent of the FPG, or $16.06 per hour ($33,408 annually). The range for self-sufficiency is anywhere from 270 percent of FPG in Hamilton County to 144 percent of FPG in Vermillion County.

The hourly wage required for self-sufficiency in Marion County ($19.95 per hour) is nearly triple the hourly minimum wage of $7.25 per hour and just under one and a half times that of the median hourly wage in Indiana of $15.10 in 2010.

Figure 1 illustrates these specific budget constraints for a family of three in Marion County. Nearly 2.24 million Hoosiers face the same struggles.

**Figure 1: Self Sufficiency Wage Compared to Other Benchmarks, 2009-2011**

- Housing: $8,892
- Food: $5,977
- Childcare: $12,864
- Healthcare: $3,821
- Transportation: $3,821
- Other Necessitates: $3,569
- Net Taxes (incl. credits): $2,562
- Total Expenses: $41,506
- Hourly Wage Needed = $19.95
WHY WORK SUPPORTS?

Given the new economic reality that families across the U.S. and Indiana face, work supports are the counter-weight to the gap between the increasing costs of basic necessities and the falling incomes of working families. Evidence shows that work supports are good fiscal policy because they put money into the hands of consumers. They also encourage work. Most importantly they have been proven to effectively lift millions of Americans out of poverty and put them on a path to economic self-sufficiency—nearly cutting poverty in half in 2010. At the same time, the 2011 U.S. Census data suggest that, from 2010 to 2011, a large majority of Hoosiers who moved out of the 100 to 200 percent FPG levels fell deeper into poverty—below 100 percent.

“Credits like the EITC (Earned Income Tax Credit) and CTC (Child care Tax Credit) have helped to reduce poverty, provide economic security, and offset declining labor-market opportunities for low-income workers. The EITC alone is responsible for raising 6.6 million people out of poverty, (including 3.3 million children).” Brookings Institution

*See Appendix for eligibility for various government programs
The fact that work itself is not enough to be economically self-sufficient does not apply only to those making the paltry federal minimum wage of $7.25 per hour. As Table 2 illustrates, a single mother earning $10 per hour while raising one preschool age child and one school age child does not begin to approach economic self-sufficiency without work supports. Without the child care subsidies, in addition to the federal and state tax credits, SNAP and the Public Health Insurance, the single mother would be in the red. In the table below, the expenses included are the most basic of necessities needed to support families. Not included are durable goods (such as furniture or appliances), payments on debt, savings, or asset accumulation, such as a home, an education or retirement. Activities to improve the overall quality of life are also not included.

*Child care subsidies are reflected in the reduction of child care expenses and utilities are reflected in housing expenses.
Most often the single greatest barrier to self-sufficiency for low-income individuals is the “cliff effect.” Eligibility for work support programs such as Supplemental Nutrition Assistance Program (SNAP), and Child Care Development Fund (CCDF) are based on income. Generally, eligibility for these programs is below 200% of the Federal Poverty Guidelines, with benefits phasing out as earnings increase. The unintended consequences in this design mean that an increase in a family’s income can significantly set back a family’s goal towards economic self-sufficiency.

In Figure 2, the “cliff effect” is illustrated. The red breakeven line is the point in which income is equal to expenses related to the costs of basic necessities. At a wage of $8 per hour, a single mother with one preschool age child and one school age child, with the support of federal and state tax credits, SNAP, public health insurance, and a child care subsidy is self-sufficient. The first significant loss in net resources occurs when the participant loses SNAP benefits between the wages of $11.50 and $12.00 per hour—a total annual net resource loss of $2651—nearly 11 percent of annual income. Most dramatically though is the “cliff” that occurs as child care subsidies are lost between the wages of $15.00 and $15.50 per hour—a total net resource loss of $8,454—a painful 25 percent loss in annual resources as a result of a $0.50 raise. Finally, between the wages of $22.00 per hour and $22.50 per hour, when Hoosier Healthwise is lost, the total annual net resource loss is $574. While the latter is much smaller, punishment for hard work at levels near self-sufficiency is significant to our families. It is therefore no surprise that low-income workers would consider the economic impact of this “cliff” for their families before accepting a raise, effectively acting as a barrier to employment. The lack of an “EITC cliff” in the chart below is evidence (and an example) of a program well designed to phase out gradually.

Source: National Center for Children in Poverty’s Family Resource Simulator, Indiana 2011 <www.nccp.org/tools/frs>. When eligible, the family receives the following work supports: federal and state tax credits, SNAP/food stamps, public health insurance, and a child care subsidy. Budget numbers are from NCCP Basic Needs Budget Calculator and the Self Sufficiency Standard for Indiana.

*See our video for a graphic illustration of the “cliff effect” www.incap.org/cliffeffectreport.html.
CONCLUSION: REVERSING COURSE

The Institute’s position is that work is key to achieving economic self-sufficiency, and that Indiana’s state government, in collaboration with private and non-profit sectors, has an important role to play in improving the conditions and opportunities of low-wage workers and their families. In order for Indiana to prepare for a more prosperous future, policymakers must choose to invest in Indiana’s workers and their families by strengthening state policies that lead to opportunities for Hoosiers to achieve and maintain economic self-sufficiency.

A significant amount of legislation in the past few decades has had a net negative effect on families in the U.S. and Indiana by contributing to the weakened labor market, adding to the erosion of wages, and helping to explain the long-term increases in poverty. As we slowly recover from the latest recession, and perhaps the past few decades, we should move away from these policy choices that continue to harm working families in Indiana. These families work hard, play by the rules, and yet, public policy acts as a deterrent to economic mobility. The role for state government in Indiana should not be to punish working families by cutting or eliminating programs entirely, but to design public policy that rewards hard work and promotes economic mobility by providing adequate resources for working families and simultaneously encouraging progress in the workforce.

In the following section, the Institute has provided policy recommendations to give Hoosier families a fair shake at achieving and maintaining economic self-sufficiency.

POLICY RECOMMENDATIONS: ENCOURAGE ECONOMIC MOBILITY

As a whole, the Institute recommends the following for each of these programs listed below:

**Smooth Out Benefit Phase-Outs**
A gradual phase-out, as opposed to the “cliff”, provides the most basic incentive to work hard; a raise that increases net resources.\(^8\)

**Implement Broad Based Categorical Eligibility (BBCE)**
Indiana adopted BBCE during the 2011 legislative session, but has yet to implement the rule.

**Change Monthly Income Eligibility Limits**
Use average of six months or one year to more accurately reflect fluctuating incomes due to irregular hours or seasonal employment.

**Raise Income Tax Threshold**
Indiana begins taxing low-income households (single parent with 2 children) at $18,310 in 2010. Only a handful of states tax residents below the Federal Poverty Level.\(^9\)

**The Supplemental Nutrition Assistance Program (SNAP)**
SNAP is a core component of America’s nutrition assistance safety net that increases purchasing power (acting as a supplement) to provide sufficient food for families. From 2001 through 2008, the number of SNAP participants grew unprecedentedly. The percentage increases in SNAP participation from 2007 through 2011 also grew at an unrivaled rate. In both instances, SNAP grew according to need, by design. Unfortunately, Indiana’s increase between 2007 and 2011 (51%) was not proportionate to the average national increase in participation (69%). This mismatch is also by design. Given its effectiveness in fighting poverty, the Institute recommends the following to strengthen one of the most successful anti-poverty initiatives.

- **Raise the SNAP Gross Income Limit:** Increase from 130% of FPG to 200% of FPG. This increase would reduce the first major SNAP “cliff” and;
- **Remove Asset Test of $2000:** In addition, remove limit of $3,250 households with an elderly or disabled member. Indiana has extremely low asset limits for SNAP (and TANF).\(^10\) Strict access limits are punitive and can discourage savings and asset accumulation.
The CCDF is a federal program specifically devoted to child care services and quality, but the program eligibility limits are set at the state level. Because the CCDF benefit “cliff” is the single greatest barrier to self-sufficiency, and child care costs in Indiana are soaring (10th highest in U.S., or 46 percent of State Median Income for a single parent), the state must ensure not only that work pays for low-income parents, but that high quality early child care services are provided. Unfortunately, poverty rates among children in Indiana continue to increase—from 21.7 percent in 2010 to 23 percent in 2011. In addition to phasing out benefits and adopting BBCE, the Institute recommends the following:

- **Invest More Money Into the CCDF Program:** Indiana is currently using all of its CCDF allocation, resulting in a wait-list;
- **Raise the CCDF Gross Income Limit:** Increase from 171% of FPG to 250% of FPG. This increase would reduce the greatest benefit cliff, encourage employment and support economic mobility and self-sufficiency and;
- **Increase Co-Payments:** If Indiana would increase co-payments on families at the higher end of the income eligibility range, the gained revenue could go towards serving more in the CCDF program.

**FIGURE 3: Hypothetical Policy Change, Increasing CCDF income limit to 250% FPG.**

![Image of a graph showing the impact of raising the CCDF income limit from 170% to 250% of the Federal Poverty Line](source:image)

**Source:** National Center for Children in Poverty's Family Resource Simulator. Indiana 2011 (<www.nccp.org/tools/frs>). When eligible, the family receives the following work supports: federal and state tax credits, SNAP/food stamps, public health insurance, and a child care subsidy. Budget numbers are from NCCP Basic Needs Budget Calculator and the Self Sufficiency Standard for Indiana.

*See the Institute's policy brief on CCDF: [www.incap.org/documents/iiwf/2012/CCDF7-2811.pdf](http://www.incap.org/documents/iiwf/2012/CCDF7-2811.pdf)*

The EITC is a federal tax credit for low-to-moderate-income working individuals and families. The credit reduces the tax burden placed on workers by offsetting payroll and income taxes. The credit is also refundable—meaning that if the credit exceeds the amount of taxes owed, the difference is given back to the worker. Thus, earned income is put into the pockets of working individuals and families. Indeed, it has been proven to encourage work, especially among single mothers to reduce poverty. In fact, President Ronald Reagan called it the “best anti-poverty, the best pro-family, the best job creation measure to come out of Congress.” New research also shows that “adding $3,000 a year in EITC income to children in working-poor families before age 6 increases working hours by 135 hours a year between the ages of 25 and 37, and increases their annual earnings by 17% over the same period.” However, it is estimated that approximately 25 percent of taxpayers who are eligible do not claim the credit. In addition to phasing out benefits and adopting BBCE, the Institute recommends the following:

**Raise the state Earned Income Tax Credit from 9% to 25% of the federal EITC**: Indiana is to be commended for adopting a state EITC, but at 9% of the federal benefit the state benefit is now modest compared to most other state EITC’s.

**Figure 4** illustrates the result of the increased credit. Before the credit expires at a wage of $20.00 per hour, the average increase in net resources is $417 during the life of the credit. Additionally at a wage of $8.00 per hour, the increase in annual net resources is $818. At a wage of $12.00 per hour, the increase in annual net resources is $539.00. At $14.00 per hour, the increase in annual net resources is $400. While appearing insignificant, these increases can make or break a family that is working towards economic self-sufficiency, many of whom are already struggling in a low wage economy.

**FIGURE 4: Hypothetical Policy Change, Increasing State EITC to 25%. Impact of Raising State EITC from 9% (blue line) to 25% (green line) of federal EITC.**

---

APPENDIX

In Figure 5, the “cliff effect” is illustrated for Allen County. The first significant loss in net resources occurs when the participant loses SNAP benefits between the wages of $11.50 and $12.00 per hour—a total annual net resource loss of $2,397. The “cliff” that occurs as child care subsidies are lost between the wages of $15.00 and $15.50 per hour equals a total net resource loss of $6,828. Finally, between the wages of $22.00 per hour and $22.50 per hour, when Hoosier Healthwise is lost, the total annual net resource loss is $567.

![Figure 5: The Cliff Effect in Allen County](image1)

In Figure 6, the “cliff effect” is illustrated for Clark County. The first significant loss in net resources occurs when the participant loses SNAP benefits between the wages of $11.50 and $12.00 per hour—a total annual net resource loss of $2,651. The “cliff” that occurs as child care subsidies are lost between the wages of $15.00 and $15.50 per hour equals a total net resource loss of $5,381. Finally, between the wages of $22.00 per hour and $22.50 per hour, when Hoosier Healthwise is lost, the total annual net resource loss is $473.

![Figure 6: The Cliff Effect in Clark County](image2)

Source: National Center for Children in Poverty’s Family Resource Simulator, Indiana 2011 <www.nccp.org/tools/frs>. When eligible, the family receives the following work supports: federal and state tax credits, SNAP/food stamps, public health insurance, and a child care subsidy. Budget numbers are from NCCP Basic Needs Budget Calculator and the Self Sufficiency Standard for Indiana.
In Figure 7, the “cliff effect” is illustrated for Lake County. The first significant loss in net resources occurs when the participant loses SNAP benefits between the wages of $11.50 and $12.00 per hour—a total annual net resource loss of $2,651. The “cliff” that occurs as child care subsidies are lost between the wages of $15.00 and $15.50 per hour equals a total net resource loss of $7,945. Finally, between the wages of $22.00 per hour and $22.50 per hour, when Hoosier Healthwise is lost, the total annual net resource loss is $557.

Figure 7: The Cliff Effect in Lake County

In Figure 8, the “cliff effect” is illustrated for Tippecanoe County. The first significant loss in net resources occurs when the participant loses SNAP benefits between the wages of $11.50 and $12.00 per hour—a total annual net resource loss of $2,651. The “cliff” that occurs as child care subsidies are lost between the wages of $15.00 and $15.50 per hour equals a total net resource loss of $7,200. Finally, between the wages of $22.00 per hour and $22.50 per hour, when federal and state EITC are lost, the total annual net resource loss is $569.

Figure 8: The Cliff Effect in Tippecanoe County
In Figure 9, the “cliff effect” is illustrated for Vanderburgh County. The first significant loss in net resources occurs when the participant loses SNAP benefits between the wages of $11.50 and $12.00 per hour—a total annual net resource loss of $2,558. The “cliff” that occurs as child care subsidies are lost between the wages of $15.00 and $15.50 per hour equals a total net resource loss of $6,516. Finally, between the wages of $22.00 per hour and $22.50 per hour, when Hoosier Healthwise is lost, the total annual net resource loss is $568.

**Source:** National Center for Children in Poverty's Family Resource Simulator, Indiana 2011 (<www.nccp.org/tools/frs>). When eligible, the family receives the following work supports: federal and state tax credits, SNAP/food stamps, public health insurance, and a child care subsidy. Budget numbers are from NCCP Basic Needs Budget Calculator and the Self Sufficiency Standard for Indiana.

In Figure 10, the “cliff effect” is illustrated for Wayne County. The first significant loss in net resources occurs when the participant loses SNAP benefits between the wages of $11.50 and $12.00 per hour—a total annual net resource loss of $2,278. The “cliff” that occurs as child care subsidies are lost between the wages of $15.00 and $15.50 per hour equals a total net resource loss of $2,729. Finally, between the wages of $22.00 per hour and $22.50 per hour, when Hoosier Healthwise is lost, the total annual net resource loss is $573.

METHODOLOGY

This report features results from NCCP’s Family Resource Simulator and Basic Needs Budget Calculator, which are web-based policy analysis tools designed for policymakers, administrators, advocates, and researchers. The Family Resource Simulator calculates the impact of federal and state work supports on the budgets of low-to moderate-income families. The Simulator concretely illustrates the effectiveness of current policies in encouraging and supporting work. NCCP also uses this tool to model potential policy reform. Family Resource Simulators are available or under development for 26 states.

The Basic Needs Budget Calculator is a related tool that shows how much a family needs to make ends meet without the help of work supports. Users select the number of parents and ages of children and may adapt the estimates developed by NCCP or replace them with their own estimates. The Budget Calculator estimates the family’s tax liability and overall budget according to these entries.

For this report, the Indiana Institute for Working Families asked NCCP to incorporate expense estimates from the Self Sufficiency Standard for Indiana (Center for Women’s Welfare, University of Washington) into the Budget Calculator. Self Sufficiency Standard values are used for the two major family expenses: housing and child care.

Family expenses

Rent and utilities
The cost of rent and utilities is based on the Fair Market Rent determined by the U.S. Department of Housing & Urban Development. This value varies by county and number of children; Basic Needs Budgets assume a 2-bedroom unit for families with 1 or 2 children and a 3-bedroom unit for families with 3 children.

Food
The cost of food is based on the Low-Cost Food Plan developed by the U.S. Department of Agriculture, which varies according to family size and the ages of family members.

Child care
The cost of child care is based on data from Indiana’s child care market rate survey, using 75th percentile rates for licensed family care facilities and child care centers. Values vary by the child’s age and the county.

For two-parent families, cost also varies depending on the second parent’s employment status. When both parents work full-time, Basic Needs Budgets assume that the family needs full-time child care. When the second parent works part-time, Basic Needs Budgets assume that the family needs part-time child care. When the second parent is not employed, Basic Needs Budgets assume that the family does not need child care.
Health insurance premiums
The cost of health insurance premiums is based on the average employee contribution for employer-based family coverage in Indiana’s private sector, according to the Medical Expenditure Panel Survey (MEPS) conducted by the federal Agency for Healthcare Research and Quality.

Out-of-pocket medical expenses
The cost of out-of-pocket medical expenses is based on data from the Medical Expenditure Panel Survey (MEPS) conducted by the federal Agency for Healthcare Research and Quality. These estimates vary by the number of parents and children covered.

Transportation
For all Indiana counties, the cost of transportation reflects the assumption that parents commute to work by car and is estimated using the Economic Policy Institute’s Basic Family Budget methodology. This methodology relies on data from the U.S. Department of Transportation’s National Household Transportation Survey and cost-per-mile calculated by the Internal Revenue Service. The cost of transportation varies by county. For two-parent families, cost also varies depending on the second parent’s employment status.

Other necessities
The cost of other necessities is estimated using the Economic Policy Institute’s Basic Family Budget methodology, which relies on data from the Consumer Expenditure Survey. It equals 27 percent of the sum of the family’s (unsubsidized) housing and food costs.

Debt
Basic Needs Budgets do not include any debt payment; however, users can choose to add this expense.

Payroll taxes
The cost of payroll taxes is calculated following federal tax regulations.

Income taxes
The cost of income taxes is calculated following federal, state and local tax regulations. Income tax calculations take into account the Federal Earned Income Tax Credit, the Federal Child Tax Credit, and the Federal Child and Dependent Care Tax Credit. The Indiana Earned Income Tax Credit is also included.
